Education

Wayne State University Graduation Fall 2026
B.S. Computer Science *Detroit, MI*

Technical Skills

Languages: C#, Python, TypeScript, C/C++, Java, HTML, CSS, SQL
Frameworks & Libraries: .NET, Node.js, React.js, Express.js, Next.js, NestJS, Tailwind CSS
Technologies: Azure (Functions, APIM, CosmosDB), MongoDB, PostgreSQL, Vercel, Git, Linux/WSL

Experience

IT Intern May 2026 – Aug 2026
Meijer, Pharmacy Core Services *Grand Rapids, MI*

- **Created a serverless, vendor-agnostic API** using Azure Function Apps and APIM to integrate automated, HIPAA-compliant data retrieval into the existing pharmacy IVR system.
- **Decreased manual prescription input and pharmacist intervention**, mitigating customer input errors and shortening call durations to drive measurable labor savings.
- **Designed a robust persistence layer** using Cosmos DB to efficiently cache patient data, optimizing performance and enabling a highly personalized IVR experience.
- **Presented a viable POC and ROI analysis to executive leadership**, demonstrating how the solution minimizes pharmacy labor bottlenecks and technical inefficiencies.

Advanced Repair Agent August 2024 – May 2026
Best Buy, Geek Squad *Westland, MI*

- **Analyzed application crashes and system instability** through **monitoring tools, crash dumps, and system event logs** to isolate root causes.
- **Diagnosed complex hardware and software failures** across diverse consumer electronics.
- **Translated technical diagnostics into insights** for non-technical clients.
- **Delivered technical support** across **in-person, telephone, and digital interfaces**.

Projects

DB 4 LOL *(MERN Web App)*

- **Developed a full-stack MERN web app** integrating with the **Riot Games API** to display **champion item builds, player stats, and game data.**
- **Implemented a RESTful API backend** in **Node.js/Express** for handling Riot API data and serving champion, item, and player information.
- **Implemented rate limiting** with **Upstash Redis** to control API usage, prevent abuse, and ensure compliance with Riot's request quotas.

Sea Spot *(Next.js + Spotify API)*

- **Engineered a full-stack Next.js application** integrating **Spotify OAuth authentication** and **real-time API calls** to create a personalized music insight platform with an **MBTI-style personality quiz** and algorithmic song recommendations.
- **Implemented OAuth 2.0 authentication** using **Better Auth** to securely handle **Spotify** user login and session management.
- **Integrated the Spotify API** to fetch user listening data, top artists, and generate personalized recommendations.
